1 Safety Precautions

1. The design of this product contains special hardware. Many circuits and components specially for safety purposes.
For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by (\triangle) on the schematics and parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list in Service manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubing barriers and/or the like to be separated from live parts, high temperature part, moving parts and/or sharp edges for the prevention of electric shock and fire hazard.
When service is required, the original lead routing and dress should be observed, and they should be confirmed to be returned to normal, after re-assembling.

5. Leakage current check

(Safety for electrical shock hazard)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the Products (antenna terminals, knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5 mA AC (r.m.s.).

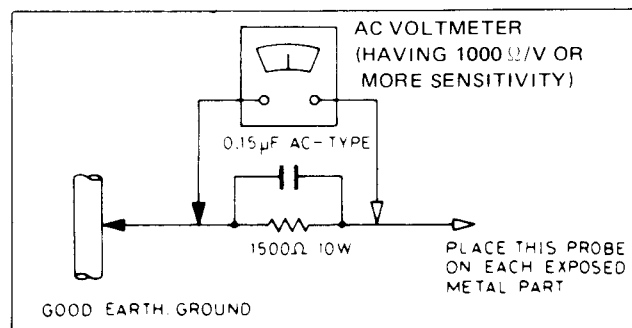

- Alternate check method.

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.).

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

2 Specifications

Speakers : 8 cm x 2

Tuner section

Frequency ranges : FM 88 — 108 MHz
 MW (AM) 530 — 1620 kHz (RC-N5A/B/E/G)
 AM 530 — 1602 kHz (RC-N5U)
 LW 150 — 350 kHz (RC-N5B/E/G)
 SW 6 — 18 kHz (RC-N5A/U)

Antennas : Telescopic antenna for FM & SW
 Ferrite core antenna for MW & LW

Tape recorder section

Track system : 4-track 2-channel stereo
 Frequency response: 100 — 12,000 Hz
 Wow & flutter : 0.15 % (WRMS)
 Fast wind time : Approx. 150 sec. (C-60 cassette)

Amplifier section

Power output : Max. 2.8 W (1.4 W + 1.4 W) at 8 Ω
 2.4 W (1.2 W + 1.2 W) at 10 % THD
 Input jack : Mic x 1, 0.7 mV (−62 dBV),
 200 Ω ~ 2 k Ω
 Output jack : Headphone x 1 (22 mW/32 Ω , 8 ~ 32 Ω)
 Power supply : DC 9 V (6 "R6" batteries)
 AC 220 — 240 V/110 — 120 V, 50/60 Hz (RC-N5A/B/E/G)
 AC 220 — 240 V/110 — 127 V (RC-N5U)

Power consumption: 9 W

Dimensions

Open : 450(W) x 165(H) x 77(D) mm
 Closed : 300(W) x 165(H) x 77(D) mm

Weight : Approx. 1.8 kg (without batteries)

Design and specifications are subject to change without notice.

3 Location of Controls and Their Functions

Fig. 3-1

Fig. 3-2

- ① AC IN jack
- ② BEAT CUT switch
- ③ MODE switch
- ④ Telescopic antenna
- ⑤ BAND switch (FM/MW/LW)
- ⑥ Voltage selector
- ⑦ Cassette operation buttons
 - ⏸ PAUSE button
 - /▲ STOP/EJECT button
 - ⏮ FF button
 - ⏭ REW button
 - ▶ PLAY button
 - REC button
- ⑧ Cassette holder
- ⑨ TUNING knob
- ⑩ VOLUME control
- ⑪ TONE control
- ⑫ FUNCTION switch
- ⑬ MIC jack (monaural)
- ⑭ Headphone jack (📞)

② BEAT CUT switch

Usually set it to "NORM 1" position.

Beat sound which may occur while recording MW or LW broadcasts can be eliminated by changing the position of this switch.

③ MODE switch

STEREO:

Set to this position when listening to stereo sources such as FM stereo broadcast or music cassettes.

Also used when listening to monaural sources such as MW or LW broadcast etc., or when listening to binaural playback through headphones.

BIPHONIC/WIDE: Set to this position when listening widely enhanced stereo sources or binaural tapes through the built-in speakers.

Note: Any setting other than the above will result in unnatural sound localization.

⑦ PAUSE button

Use this button to stop temporarily the tape during playback or recording. With both the PAUSE and REC buttons pressed beforehand, release the PAUSE button at the desired spot for exact (timing) recording.

⑫ FUNCTION switch

RADIO:

This position should be used when listening to the radio or when recording from the radio.

TAPE/RADIO STANDBY: When playing cassette, when recording using external microphone or when switching off the radio, switch to this position.

4 Removal Procedure of Main Parts

■ Cabinet Ass'y Section

■ Cabinet

- 1) Remove 12 screws ① and ② securing the cabinet.
- 2) Turn over the set and extend the speaker sections to right and left. Then, remove the front cover together with the band switch and tuning knob.
- 3) After the above procedures, the tuner section can be removed.

Fig. 4-1

■ Tuner chassis

- 1) Remove a screw ③ fixing the tuner board to the cabinet.
- 2) Push the tuner chassis in the direction of the center of the set, and disengage the two pawls located near the pointer.

Note: When removing the tuner board assembly entirely, remove a screw ③', too.

- 3) In the above state, the right speaker can be removed.

Fig. 4-2

■ Power supply board

- 1) Pull the power supply board out of the cabinet.

■ Cassette section (Amplifier ass'y and Mechanism ass'y)

- 1) Remove eight screws ④ securing the slider bars to the rear cabinet.

Fig. 4-3

■ Center cabinet

- 1) Remove four screws securing the cabinet from the top and bottom sides.
 - * The above procedure must be done from the bottom side first.
- 2) Remove two screws securing the amplifier board.
- 3) To remove the mechanism assembly, remove the screws securing it at the four corners, and open the cassette door before doing it.

Mechanism Section

Removal of Mechanism Parts

1. REC/PB head
Remove a screw ① securing it at right side.
Pull the head rightward to remove it.
2. Erase head
Disengage the stopper's pawl ④ of the erase head arm.
3. Disengage the stopper's pawl ⑤ of the pinch roller arm.
4. The disk is built in with pressure, but it can be removed by pulling out.
5. Flywheel assembly
1) Remove the main belt first.
2) Remove the C-washer ③ securing the capstan shaft.
3) Pull the flywheel assembly outward (after disengaging the RF belt).
6. Remove the button assembly from the mechanism chassis.

Fig. 4-4

Fig. 4-5

- **Leaf switch**
Disengage the pawl by pressing its left side, and raise the switch from left side to remove it.

- **Gear assembly (on the bottom of the flywheel)**
Remove the C-washer ④ securing the gear.
(When re-assembling, make sure to insert an arm stud into the portion ⑦.)

- **Lock arm**
Push the arm's stopper from the window ⑧ and pull it to this side to remove it.

- **Chassis**
1) Disengage the springs at the three points of ⑥, ⑥, and ⑥.
2) Remove two screws ②.
3) Remove two screws ③ securing the capstan metal section.
4) Gently remove the button assembly from the chassis.

Fig. 4-6

Fig. 4-7

Fig. 4-8

5 How to Engage Dial Cord

Fig. 5-1

1. Turn the dial drum fully counterclockwise to the position of the stopper on the chassis (to the minimum frequency position).
2. Use cable of 494 mm (VHR2TK9-05AT) to employ the dial cord.

Installation of Pointer

1. Turn the tuning shaft (knob) counterclockwise to its minimum frequency position.
2. Fit the pointer on the cord by setting it for the hole on the chassis.

6 Main Adjustments

Conditions

Power supply : DC 9 V (Tuner Input 5 V)
 Load : 50 mW (0.63 V/8 Ω)
 Function switch : TAPE
 Tone : Maximum position

Specified input : MIC -60 dBs
 Measuring point (output) : Speaker terminal
 Modulation of SSG : 400 Hz, 30% at AM
 400 Hz, 22.5 kHz at FM

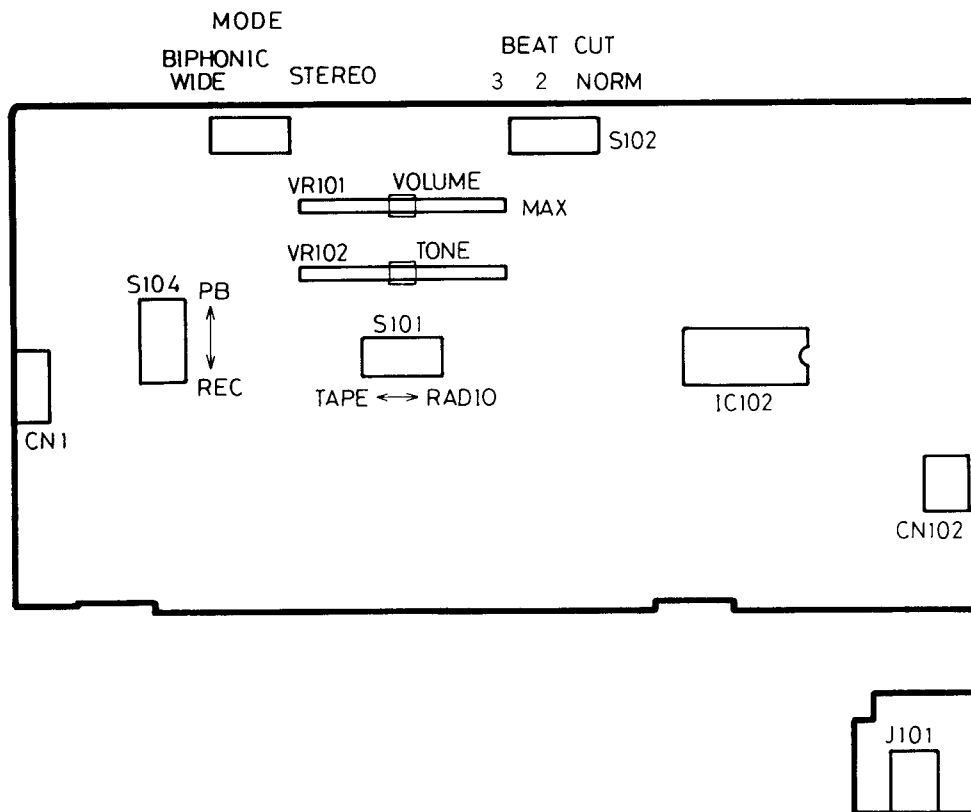

Fig. 6-1

Item	Tape to be used	Procedure	Adjusting Point
Azimuth	VTT702 (8 kHz)	With the maximum output	R/P head azimuth screw
Tape speed and Wow & flutter	VTT712 (3 kHz)	Adjust semi-fixed resistor inside the motor so that the counter reads 3010 Hz \pm 15 Hz. Make sure that wow & flutter is within 0.15% (JIS WRMS).	Semi-fixed resistor inside the motor
Playback output power	VTT722 (1 kHz)	Maximum output should be 1100 mW (2.97 V/8 Ω). Output should be 1000 mW or more with 10% T.H.D. (2.8 V/8 Ω).	—
Playback frequency characteristics	VTT736 125 Hz 1 kHz 8 kHz	The playback output level should satisfy the following characteristics with respect to 1 kHz. 125 Hz Within +1 \pm 3 dB 8 kHz Within +1 \pm 3 dB	—
R/P frequency characteristics	Normal tape(UR) (TS-8)	Apply -20 dB signal with respect to the specified input: the following values should be satisfied when the 1 kHz signal is reference. 125 Hz +1 dB \pm 3 dB 8 kHz +1 dB \pm 3 dB	—
Erasability	Normal tape	Erase the prerecorded tape, then check to see if the previous recording has been erased completely.	—
Biphonic function	VTT752	<ul style="list-style-type: none"> Set the Biphonic switch to the 'BIPHONIC WIDE' position. With the VTT752 test tape being played back, measure the cross-talk level. Confirm that leak level is -4^{+2}_{-4} dB in both current flows of L \rightarrow R and R \rightarrow L. 	—

Fig. 6-2

Fig. 6-3

■ Tuner Alignment

BASIC CONDITIONS

POWER SOURCE OF THE RECEIVER	DC 9 V, AC 110-120, 220-240 V B/E/G version AC 110-127, 220-240 V U version
LOAD RESISTANCE OF THE RECEIVER	50 mW (0.63 V)/8 Ω
MODULATION OF SSG	400 Hz. 30%
Item	Description
1. AM IF ALIGNMENT	Since this item need not be adjusted, confirm the correctness according to the following procedure.
1-1 Conditions of the receiver	
(1) Power source:	DC 5 V (When the power is supplied directly to the tuner in the receiver, the voltage should be adjusted to the proper level which shall be required by the tuner.)
(2) Function switch position:	RADIO
(3) Band select switch:	AM
(4) Volume control:	Minimum gain position
(5) Tone control:	Center position
(6) Variable capacitor:	Near the minimum capacity position where no signal comes in.

Item		Description			
1-2 Connection of sweeper and the receiver (1) Tuner input: (2) Tuner output:		Positive side to TP1 Positive side to TP2 Negative side to TP3			
1-3 Aligning position:		T1			
1-4 Alignment (Waveform):		Adjust AM I.F.T. (above mentioned aligning position) so that maximum and symmetrical waveform can be obtained. In this case, the wavehead should be appeared at the center marker (450 kHz) on the scope of the sweeper.			
2. FM IF ALIGNMENT		Since this item need not be adjusted, confirm the correctness according to the following procedure.			
2-1 Conditions of the receiver (1) Power source: (2) Function switch position: (3) Band select switch: (4) Volume control: (5) Tone control: (6) Variable capacitor:		Same as mentioned in item 1-1 (1). RADIO FM Minimum gain position Center position Near the minimum capacity position where no signal comes in.			
2-2 Connection of sweeper and the receiver (1) Tuner input: (2) Tuner output:		Positive side to TP5 Positive side to TP2 Negative side to TP3			
Note: a) Attach a capacitor (30 pF) and a resistor (30 kΩ) to the positive side cable which should be led from sweeper input. b) Attach a resistor (100 kΩ) in series to the positive side cable which shall be led from sweeper output.					
2-3 Checking FM IF waveforms		<ul style="list-style-type: none">Such the symmetrical waveform as shown below can be confirmed at TP2. If the CF (carrier filter) needs to be changed because of abnormal wavefrm, replace it with the kit of three-time parts.To check the positive pulse () of the waveform, remove CF2.			
3. AM RF ALIGNMENT					
3-1 Conditions of the receiver (1) Power source: (2) Function switch position: (3) Volume control: (4) SEA control: (5) Variable capacitor:		Same as mentioned in item 1-1 (1) RADIO 50 mW Center position Refer to the following list shown in item 3-4.			
3-2 Conditions of SSG (1) Modulation: (2) Frequency: (3) Output level of the attenuator in SSG:		Refer to the basic condition. Refer to the following list shown in item 3-4. Approx. 50 mW			
3-3 Power output measuring position:		Speaker terminals			
3-4 Alignment:					
	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of SSG	Variable Capacitor Position	Aligning Position
1	AM	Loop Antenna	520 kHz	Max. capacity	L4
2			1,650 kHz	Min. capacity	TC-4
3			Adjust the above aligning position (L4 & TC-7) repeatedly so that the tuner cann receive frequency in the above range (band width).		
4			600 kHz	600 kHz can be received	L3
5			1,400 kHz	1,400 kHz can be received	TC-3
6			Adjust the above aligning position (L3 & TC3) repeatedly so that the tuner can obtain the best sensitivity.		
7	LW (B/E/G version)	Loop Antenna	145 kHz	Max. capacity	L6
8			360 kHz	Min. capacity	TC-6
9			Adjust the above aligning position (L6 & TC-6) repeatedly so that the tuner can be received above frequency range (band width).		
10			145 kHz	to be received 145 kHz	L8
11			360 kHz	to be received 360 kHz	TC-8
12			Adjust the above aligning position (L3 & TC-2) repeatedly so that the tuner can be obtained the best sensitivity.		

	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of SSG	Variable Capacitor Position	Aligning Position
13	SW (U version)	Dummy Antenna	5.8 MHz	Max. capacity	L6
14			18.6 MHz	Min. capacity	TC-6
15			Adjust the above aligning position (L6 & TC-6) repeatedly so that the tuner can be received above frequency range (band width).		
16			6 MHz	to be received 6 MHz	L8
17			18 MHz	to be received 18 MHz	TC-8
18		TP1 (Positive) TP2 (Earth)	Adjust the above aligning position (L8 & TC-8) repeatedly so that the tuner can be obtained the best sensitivity.		
Item			Description		
4. FM RF ALIGNMENT					
4-1 Conditions of the receiver.					
(1) Power source:			Same as mentioned in item 1-1.		
(2) Function switch position:			RADIO		
(3) Band select switch:			FM		
(4) Volume control:			50 mW		
(5) SEA control:			Center position		
(6) Variable capacitor:			Refer the following list shown in item 4-3.		
4-2 Condition of FM SSG.					
(1) Modulation:			Refer the basic condition		
(2) Frequency:			Refer the following list shown in item 4-3.		
(3) Output level of the attenuator in FM SSG:			The level shall be decided by the load resistance of the receiver mentioned in the basic conditions.		
4-3 Alignment:					
	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of SSG	Variable Capacitor Position	Aligning Position
1	FM (B/E/U version)	Dummy Antenna	87.6 MHz	Max. capacity	L1
2			109.1 MHz	Min. capacity	TC-1
3			Ajust the above aligning position (L1 & TC-1) repeatedly so that the tuner can be received above frequency range (band width).		
4			90 MHz	to be received 90 MHz	L2
5			106 MHz	to be received 108 MHz	TC-5
6			Adjust the above aligning position (L2 & TC-5) repeatedly so that the tuner can be obtained the best sensitivity.		
7	FM (G version)	Dummy Antenna	87.6 MHz	Max. capacity	L1
8			108.4 MHz	Min. capacity	TC-1
9			Ajust the above aligning position (L1 & TC-1) repeatedly so that the tuner can be received above frequency range (band width).		
10			90 MHz	to be received 90 MHz	L2
11			106 MHz	to be received 108 MHz	TC-5
12			Adjust the above aligning position (L2 & TC-5) repeatedly so that the tuner can be obtained the best sensitivity.		

●MPX :

Since no adjustment is required for MPX, check up ICs if abnormality or incorrectness is founded in MPX function.
